PROFESSIONAL SUMMARY

Software Engineer with **3+ years** of experience in JAVA, SPRING BOOT, MICROSERVICES, and REACTJS, with hands-on expertise in SYSTEM DESIGN, MULTITHREADING, SOLID PRINCIPLES, and DESIGN PATTERNS. Proficient in building scalable enterprise applications using DOCKER, KUBERNETES, and CI/CD pipelines, and delivering AI-powered solutions with RAG, VLLM, and AGENTIC AI on AWS and GCP.

PROFESSIONAL EXPERIENCE

Benison Technologies Pvt Ltd – Associate Engineer | Pune | Dec 2023 – Present

- Designed MICROSERVICES-BASED APPLICATIONS using JAVA and SPRING BOOT, applying SOLID PRINCIPLES and DESIGN PATTERNS
- Built scalable frontend modules using REACTJS and ANGULAR with REDUX state management and TAILWIND CSS
- Implemented RESTFUL APIS with JWT AUTHENTICATION integrated with MYSQL and POSTGRESQL, documented via SWAGGER/OPENAPI
- Implemented asynchronous processing using APACHE KAFKA with MULTITHREADING-based PERFORMANCE OPTIMIZATION

KEY PROJECTS

AI Kiosk Voice Assistant (Current)

- Addressed in-store customer engagement challenges by building an AI-powered kiosk enabling natural voice conversations for instant product queries
- Eliminated static UI limitations by delivering a lifelike HUGGINGFACE avatar experience on a REACTJS + ELECTRON desktop kiosk
- Solved high-latency voice interaction by integrating FASTER WHISPER STT and PIPER TTS, achieving responsive real-time speech processing
- Tackled unstructured product data by building an AGENTIC AI RAG pipeline with VLLM and VECTOR DATABASE backed by automated WEB SCRAPING
- Enabled seamless kiosk-to-server audio streaming via WEBRTC, removing dependency on traditional HTTP polling
- Containerized all services as DOCKER IMAGES and deployed on AWS EC2 using CI/CD pipelines for production-ready delivery

Sales Management System

- Streamlined sales operations by developing a centralized platform using REACTJS, SPRING BOOT, HIBERNATE/JPA, and MYSQL
- Eliminated manual tracking by building real-time dashboards for license expiration and cloud subscription monitoring
- Reduced sales response time by developing an intelligent CHATBOT using MCP TOOLS and NLP for instant license and product queries
- Automated daily reporting via a JAVA MULTITHREADING-based scheduler applying SCALABILITY and PERFORMANCE OPTIMIZATION principles
- Ensured secure deployment on AWS EC2 with SPRING SECURITY, JWT AUTHENTICATION, IAM access control, and S3 data storage

Project Migration (Angular → ReactJS)

- Tackled a legacy ANGULAR codebase causing slow load times by leading migration to REACTJS with REDUX, boosting performance by 25%
- Prevented code inconsistency by establishing GIT and GITHUB ACTIONS workflows, conducting structured code reviews for 3 interns
- Accelerated development velocity by leveraging AI-assisted MCP TOOLS like CURSOR, V0 BY VERCEL, and CLAUDE AI

Remote Access Recording System

- Solved multi-protocol remote access needs by integrating APACHE GUACAMOLE with VNC, SSH, RDP, and HTTP support
- Addressed audit compliance gaps by developing SPRING SECURITY-backed SPRING BOOT services with full activity logging

Apache NiFi Data Flow

- Resolved fragmented data flow by designing enterprise pipelines with APACHE KAFKA, APACHE NIFI, and NIFI STATELESS for scalability
- Handled non-standard data formats by developing custom JAVA processors with MAVEN build tooling for seamless ingestion

AI Fortress – Policy Enforcement Platform

- Delivered an intuitive policy management UI with REACTJS and TAILWIND CSS, making complex enforcement rules accessible to non-technical users
- Mitigated security risks by implementing real-time policy enforcement and activity monitoring using SPRING SECURITY

Red Seal – Network Visualization & Reporting

- Eliminated manual reporting effort by implementing multi-format exports (PDF, CSV, TXT) using THYMELEAF and ITEXT
- Improved network visibility by building interactive dashboards with D3.JS and CHART.JS applying LLD and SYSTEM DESIGN principles

CIS Compliance & Security Scanning

- Automated server security audits by creating a SPRING BOOT plugin using JAVA to connect with LINUX servers via secure SSH commands
- Ensured compliance by comparing server outputs against CIS BENCHMARK standards with POSTMAN-tested REST APIS
- Reduced human error in vulnerability detection via automated rule evaluation applying DESIGN PATTERNS for an extensible rule engine
- Enabled portable scanning by containerizing the solution as DOCKER IMAGES, built with GRADLE, and deployed on production servers

TECHNICAL SKILLS

Languages: Java, JavaScript, TypeScript, SQL

Backend: Spring Boot, Spring Security, Hibernate/JPA, REST APIs, Microservices, JWT Authentication

Frontend: ReactJS, Angular, Redux, Tailwind CSS, Bootstrap, Electron, HTML, CSS

Databases: MySQL, PostgreSQL, MongoDB, Redis, Vector Databases

AI/ML & LLM: Agentic AI, RAG, vLLM, Ollama, Hugging Face, Groq, Faster Whisper STT, Piper TTS, NLP, MCP Tools

Cloud & DevOps: AWS (EC2, S3, IAM), GCP, Docker, Kubernetes, Apache Kafka, Jenkins, GitHub Actions, CI/CD, WebRTC

Testing & Docs: JUnit, Mockito, Swagger/OpenAPI, Postman | Build: Maven, Gradle

Concepts: System Design, LLD, Multithreading, SOLID Principles, Design Patterns, Scalability, Performance Optimization

EDUCATION

PG-DAC – CDAC Pune (2023) | 68% | **B.Tech CSE** – IERT Prayagraj (2020) | CGPA 7.45/10
